PROJECTS

Klade | SaaS Tech Stack Generator

- Build a developer platform similar to Vercel, enabling users to scaffold projects in multiple frameworks beyond JavaScript web apps.
- Designed API's, CI/CD pipelines, and responsive UI to support dozens of frameworks and deployment targets.
- Gained hands-on experience with SaaS architecture, product scaling, and user-centric feature design.

QuackCare | Full-Stack AI Chatbot

- Developed a mental health chatbot integrating React, MongoDB, and OpenAI APIs for real-time AI support.
- Designed RESTful API's and secure backend workflows, improving accessibility for users.

Sports Analytics Database | Database Management

- Built a relational database and analytics pipeline to deliver insights on sports performance trends.\

6502 Virtual Computer | Operating System

- Simulated CPU, memory, and OS behavior in-browser, for low-level systems knowledge.

Public Java API's | Algorithms and Data Structures

- Designed and tested reusable API's for algorithms and data structures with full JUnit validation
